

Triton Audio FetHead Broadcast - Mikrofonsko prepojačalo

Šifra: 14674

Kategorija proizvoda: Studijska Prepojačala

Proizvođač: TritonAudio

Cena: 16.800,00 rsd

Preamp for live and broadcast application

FetHead Broadcast was developed in conjunction with Dutch Broadcasting and facility service company United4all. It is based on technology used in our product FetHead. General layout consists of a high quality jfet gain stage, followed by a low impedance output buffer to enable output drive to long cables (up to 3000 meters).

FetHead Broadcast offers 25dB's of low noise, high quality amplification which can be applied to either dynamic or condenser microphones as phantom power is transferred to the microphone.

During live performances microphone signals often travel through long cables. If they travel adjacent to power lines or dimmed light cables, audible signal interference into the microphone cable often occurs usually resulting in a polluted signal. The FetHead Broadcast prevents this from happening by amplifying the signal before the cable. It improves the signal to noise ratio and offers a high quality signal to the mixer. Another advantage is that the FetHead Broadcast does not need main supplies or batteries.

- For all types of microphones
- 25dB amplification
- Low noise Class A JFet amplifier
- Internal supply power filtering
- Low impedance output buffer
- High voltage protection
- Reverse polarity protection
- Shielded rugged enclosure
- Requires 48V Phantom Power
