

Triton Audio FetHead germanium - Mikrofosnko pretpojačalo

Šifra: 14671

Kategorija proizvoda: Studijska Pretpojačala

Proizvođač: TritonAudio

Cena: **10.680,00** rsd

In-line germanium microphone preamp

FetHead Germanium is a high quality, in-line microphone preamplifier. It provides a punchy and direct, 'larger than life' germanium sound for ribbon and dynamic microphones, adding classy Germanium harmonics. Sounding full and rich it is reminiscent of much higher priced vintage gear, making FetHead Ge's desirable coloration a really great addition to (Interface) preamps which sound rather neutral.

Germanium flavour

Germanium transistors were widely used in earliest transistor designs by *Neve*, *EMI*, *Telefunken*, and *Fairchild*, and have developed a reputation for a decidedly vintage mojo that remains sought after today. We created a novel hybrid circuit that consists of low noise JFets and a hand-selected 'new old stock' germanium transistor to take full advantage of the "Germanium" sound and at the same time achieve the same sonic quality we are known for.

Protects the microphone

Some ribbon microphone do not tolerate phantom power. FetHead Germanium circuit uses 48v phantom power but shields it from the microphone, your microphone is protected.

For Ribbon & Dynamic microphones

Hybrid JFet/Germanium amplifier

29dB amplification

Lifetime warranty new old stock Ge transistor

Shielded rugged enclosure

Requires 48V Phantom Power
