“The new Primare Prisma NP5 is a network player intended to be easily integrated into any existing hi-fi system. Your installation is immediately up to date. The Primare Prisma NP5 is an... [View full review](#)

Key features

Stream hundreds of music services from the internet using familiar apps and devices, including high resolution platforms like Qobuz, Spotify, and Tidal HiFi
Full device optimisation and control of network connected hard drives with the Prisma application
Advanced control options including digital output configuration, voice control, and sophisticated media management software with Roon
Control of volume, mute, standby, and input selection of previous Primare models with RS232 connection

Prisma - network player and multi-room technology

The Prisma technology bundle was created to allow everyone in the household to explore, discover, and share the deeply satisfying experience of high-performance music playback – providing multi-room/multi-zone connectivity and control of stored and streamed media, whether wired or wireless, all managed from mobile devices with familiar streaming apps and a dedicated system control app.

Our design philosophy

Primare products embody the Scandinavian design ideal of lagom – that sense of not too much or too little, but just right; everything in balance, proportion, and harmony.

What are the differences between the original NP5 Prisma and the NP5 Prisma MK2 versions?

The NP5 Prisma MK2 network player is the latest evolution of Primare's popular NP5 Prisma, a clever little device that provides complete Prisma network player control and connectivity technology to virtually any system with a digital input.

The development of the new model was necessitated primarily by the AKM chip factory fire, causing long-term disruption of the supply of the critical re-clocking chip at the heart of the NP5 Prisma design that allowed for the selection of output sampling frequencies.

To continue to make available one of our most popular models with the minimum of interruption, we have sourced a readily available SRC chip and redesigned the circuit to maintain the performance of the original NP5 Prisma while allowing for:

- DoP (DSD over PCM) output as an available setting option when using Roon Ready and a DoP ready DAC.

· MQA passthrough allowing for Tidal Master and MQA files from a NAS to passthrough for higher resolution processing by a connected MQA capable DAC.

All other features and functionality remain the same as in the original version, with connection and control features that include AirPlay 2, Bluetooth, Chromecast built-in, Roon Ready, Spotify Connect (including Spotify HiFi when launched), and a host of other features - making the NP5 Prisma MK2 more than ever the network player for everyone.

All future updates will be applicable to both the original NP5 Prisma and the new NP5 Prisma MK2 models, including much anticipated playback of Tidal Master files and Qobuz at full 24/192 kHz resolution.
