

PRO-JECT Upgrade Set Advanced

Šifra: 18599

Kategorija proizvoda: Dodatna oprema za gramofone

Proizvođač: Pro-Ject

Cena: 20.280,00 rsd

PRO-JECT Upgrade Set Advanced

If you want

to upgrade the sound quality of your Pro-Ject turntable, this set of accessories becomes indispensable. The contents of the set are universal for all models of Pro-Ject turntables as well as most turntables of other brands. Using the accessory requires no special knowledge or setup, is easy to use, and the sonic benefit is audible and immediate.

CLAMP IT - pressure clamp

The sound of a vinyl record can be greatly improved if you reduce unwanted resonances between the record and the platter during playback. Therefore, the surface of the board and the plates should fit as tightly as possible. The CLAMP IT clamp is the perfect solution. The clamping mechanism around the central axis does not press the plate with its weight (weights can affect (increase) the transmission of vibrations from the motor), but the pressure can be finely adjusted according to the actual unevenness of the plate.

Clamping is easy in seconds. CLAMP IT guarantees more precise guidance of the tip and better sound results.

- Improves sound results on all turntables.
- Reduces vibrations during playback.
- Quick and easy mounting.
- Intuitive pressure setting.
- Material: aluminum + leather surface.

Benefit: Warmer sound and less noise.

LEATHER IT - High-quality damping plate pad made of bark - thickness 2.0 mm

There have long been broad discussions about how they affect the sound of the turntable pad. The interaction between the record and the surface can be very easily detected using a high-quality and more sensitive pickup. Common felt pads guarantee a smooth contact between the board and the plate, but they have the disadvantage of being static. This means that dust particles often bind to each other, which then get into the grooves of the record. Also, the damping ability is very limited, which can be a problem with metal platters.

Pro-Ject offers a very interesting possibility to improve the resulting sound quality. The Leather it pad dampens resonances very effectively, retains dust, is non-static, maintains perfect contact between the gramophone record and the surface, and dampens the resonances of the metal plate. This is a very effective way to improve the sound, reduce noise, reduce the clogging of the grooves with dust and at the same time eliminate problems with static electricity.

The thickness of 2.0 mm is suitable for all types of plates as an ideal replacement for the standard supplied felt pads for the plate.

Benefit: Reduced noise, less crackling and more detailed delivery and less static.

DAMP IT - Special anti-vibration pucks made of thermoplastic elastomer (4 pieces)

Audio components are often sensitive to mechanical vibrations that limit faithful reproduction. Damp-it pucks are the perfect solution for removing unwanted vibrations with maximum efficiency.

- Optimized for frequency from 20 to 500 Hz.
- Preventing the transmission of unwanted vibrations.
- Made of high-tech TPE (thermoplastic elastomers).
- Especially suitable for bookshelf speakers, CD/DVD/BD players, turntables, tube amplifiers and others.
- Load capacity: up to 5 kg for each puck, i.e. up to 20 kg when using 4 pieces.
- Diameter: 42 mm.
- Height: 12.7mm.

Benefit: More accurate sound.
