Watts: 300
Impedance: 8 Ohms
Speakers: 2 x 10" BLUE LINE PRO NEO
Horn: 3 Way Variable HF Driver

After years of experience, we decided to reinvent the NEO speaker. We've ventured back to the drawing board, working closely with our acoustic engineers and testing facilities. The result? Three remarkable Blue Line Pro NEO speakers: 10-inch, 12-inch, and 15-inch.

Our ABM-210-PN is a compact powerhouse, packing 300 watts of sonic brilliance. What sets it apart is its adaptability – an interchangeable grill, available in Silver or Red, lets you match your style. It boasts a three-way variable high-frequency horn, selectable via the convenient rocker switch on the universal Ashdown back plate.

Not just powerful but precise, this cabinet is sealed to deliver a powerful attack, crystal-clear definition, and extended bass frequencies. Whether you're on stage or in the studio, the Blue Line Pro NEO speakers redefine what you can achieve with your sound.

Looking at the popularity of our cab offering and that of others on the market 10" speakers have made some what of a revival in the bass market over recent years opting for a more vintage feel but delivering a full range of frequencies.

The 10 is a great speaker added to our new compact poplar ply enclosure with high frequency horn unit it is truly a very versatile cab rated at 300watts at 8ohms.

We couldn't launch a range of bass cabs without looking at a 10" speakers so once again looking at everything that makes a great 10 it needs power and a wide range of frequencies.
