Description

The perfect all-in-one solution to secure your DMX-installations: MERGER + SPLITTER + BOOSTER

100% electrical isolation between all in/outputs!

The booster function analyses the incoming DMX-signal and builds it back up from scratch to make it perfect for further use.

The splitter function distributes the DMX-signal(s) from the input(s) over 6 identical outputs that are 100% isolated from each other: problems that occur on 1 output will not influence the other outputs!

Output behavior can be selected when suddenly both DMX-inputs fail:

Hold: keep the last DMX values on the outputs.
Easy setup via 4digit LED display
