Intuitive video mixing console and performance tool

NuVJ is an intuitive VJ environment which seamlessly integrates [software](#) and [hardware](#) for a professional quality, hassle-free performance. The NuVJ environment is based around a DJ-style setup which allows you to mix, scratch, and apply effects to video clips and images. The NuVJ [software](#) and [controller](#) have been designed to be simple to use, while allowing for unprecedented variation and creativity with your [visual sources](#) thanks to an extended set of features such as live inputs, synchronization to music, and real-time visual effect generation.

How does it work?

While other products rely on hardware to mix video, the NuVJ [software](#) developed by [ArKaos](#) uses the power of graphical cards present in every computer. This allows higher resolutions and more complex effects at a very affordable price.

The NuVJ runs on PC and Mac, it allows DJs to incorporate images and video clips in much the same way as mixing music. With the NuVJ, the VJ can trigger images and video clips, add effects to them, mix them through an onboard DJ style crossfader and tweak them in order to create unique and spectacular shows. The [hardware controller](#) works seamlessly with existing DJ gear and the [software](#) is compatible with most computers and laptops. The NuVJ is simply easier, better and more affordable than any other VJ product on the market.

Positioning

The NuVJ Video Controller delivers a wealth of stunning visual capability combined with intuitive operation and makes a perfect video counterpart to an audio setup. With video sample playback and effects from a wide range of sources, internal generation of patterns and backgrounds, real-time effects, crossover patterns, and numerous additional features, the NuVJ Video Controller is the ideal tool for DJs in search of their first video setup.

The NuVJ is the perfect tool for DJs who want to synchronize video with their musical performance. The NuVJ is the result of the combined expertise of [Numark](#) and [ArKaos](#) to create a [hardware/software](#) product that is a natural extension of the DJ set up.

Applications

The NuVJ's intuitive [controller](#) interface makes it easy to use and fun to play live. Switch to automatic mode, and let it run by itself to the beat of the musics.

The NuVJ controller provides a simple and quick way to interface with the most important functions and features of the NuVJ [software](#). The controller was specifically designed to control the NuVJ [software](#), but may also be used as a generic MIDI controller for a variety of other software applications and hardware devices which support the MIDI protocol.

Features

- 2 banks of 9 sets of trigger pads for video
- Big wheels for scratch, effect, and speed control
- Automated one touch fade speeds
- MIDI compliant – can be used as controller for various devices

NuVJ allows you to mix videos and images in real time in a very intuitive way. It is built around a DJ-deck like setup where you have two playback decks and can mix the output of the decks using a mixing slider.

This setup is reflected both in the software interface and on the controller: deck A is represented by the left area of the main panel, while deck B by the right side and the mixer and master effect controls are in the middle.
