

Q ACOUSTICS 7000i Slim White 5.1 komplet 5 zvučnika+aktivni vufer

Šifra: 13361

Kategorija proizvoda: Surround Zvučnici

Proizvođač: Q ACOUSTICS

Cena: **143.880,00** rsd

The 7000i 5.1 Slim system has been designed for those who want a big sound from a very compact set of speakers, particularly the subwoofer, which at 150mm (6") deep is the slimmest they have produced so far. The Left, Right, Centre and Rear speaker enclosures are attractively designed D-shaped aluminium castings for low resonance. Its precision soundstage, powerful dynamics and rich deep bass create the perfect, discreet home cinema system.

Based on the award-winning 7000 series speaker components, constructed using precision aluminium cast enclosures

Uses the 7060 Subwoofer, which at only 150mm deep is the slimmest, standalone subwoofer Q Acoustics have ever produced

Speakers and subwoofer are available in contemporary matte black and white finishes

Deep bass extension and a powerful output belie its compact size

Big Sound Big Sound

7000i Series is a beautifully styled speaker range where the focus is on getting the biggest sound from the smallest, best-looking speakers. This is done by moving as much of the bass as is possible into a subwoofer, enabling us to make much smaller speakers for the front and surround channels, each with their mounting

Mounting Options

The supplied
speaker table
stand, which also
double as wall
bracket can be
replaced with
optional floor
stands with
uprights, which
conceal the
speaker cables
and armoured
glass,
transparent
bases as not to
conceal the floor
covering. An
optional wall
bracket allows
the 7060 to be
wall mounted
and a steel mesh
grill protects the
200mm driver
from accidental
damage.

Low Frequency Satellite Speakers

Image not found or type unknown

Low Frequency Satellite Speakers

It is of great
importance is
that there is
enough overlap
between the
speakers and
subwoofers
bandwidth to
ensure that they
crossover
seamlessly
without any gaps

or peaks. This has been done by giving the 'satellite' speakers enough low-frequency extension that they can even be used on their own.

Perfect For Wall Mounted Screens

Image not found or type unknown

Perfect For Wall Mounted Screens

Once mounted, the left, right and centre speakers can be angled to enhance their performance. The terminals are cleverly built into the mount and speaker cables can be hidden from view, making these ultra-discreet speakers an excellent choice to partner a wall mounted screen.
