QED Silver Anniyersary XT

QED Silver Anniversary XT

Šifra: 12341

Kategorija prozivoda: Hi-Fi kablovi na metar

Proizvođač: QED

Cena: 1.140,00 rsd

Designed with performance in mind, the Silver Anniversary-XT speaker cable boasts all of the characteristics associated with Silver Anniversary but with the added enhancement of the Aircore technology found in the prestigious X-Tube series. X-TUBE with Aircore technology exhibits much lower self-inductance. The use of an innovative Polyethylene aircore enables a reduction in loop inductance to levels only usually achievable by using more costly and difficult to terminate cables.

Silver plated 99.99% OFC Conductors

Compressible Teflon Aircore for ease of termination

K-Jubet Technologyun How It Works

X-Tube

Technology -

How It

Works

One of

the big

problems

as cable

conductor

size

increases,

is how

to keep

the

inductance

low.

This is

vital to

reduce

cable

losses

and

prevent

inaccuracies

in the

signal

transfer

process,

(i.e.

distortion).

The

normal

way to do this

is to use

number

of

individually

insulated

conductors

within

the

cable

construction.

This

method

is

utilised

to great

effect in

the

design

of our

Genesis

Silver

Spiral

loudspeaker

cables.

However,

this

results

in a

product

that has

a very

high

quality

sound

performance,

but is

expensive

to

manufacture

and can

be

difficult

to

terminate.

To take

advantage

of this

design

ethos,

but in a

more

conventional

format,

X-TUBE forms

the

conductor

in the

X-Tube - The Signal of a tube Image not found or type unknown with an Χinner Tube -Aircore. The This has **Signal** the At low same frequencies effect both Xas using **TUBE** multiple and insulated conductorsconventional stranded/solid and core ensures speaker that cable high frequencie **Convey** signals are transmittedⁱⁿ a linear cleanly, way. with the This is added represented benefit by the of ease uniform of terminationgreen colour This of the unique strands tubular conductor shown geometry in the two also diagrams provides above. lower Αt flux higher density frequencies within X-TUBE the conductors, retains a nearwhich linear gives improved signal transparen eransfer, whereas to the the sound. conventional stranded/solid core cable fails to efficiently conduct higher frequencies uniformly across the entire conductor

shape

area. The

diagram

shows

excess

current

density

at the

periphery

(designated

in red)

and

rapidly

deteriorating

current

density

(green

through

to

white)

towards

the

centre

of the

conductor.

The

effect of

this is

to

reduce

the

actual

cross-

sectional

area of

the

cable at

15kHz

to less

than

75% of

that at

low

frequencies.

The

result is

induced

distortion

and a

compromise

in the

performance

of the

cable.
