Proizvođač: Reloop

Cena: 4.680,00 rsd

Play

USB-DJ-audio interface with 24-Bit sound quality

Most compact format

External and internal mixer mode

USB DJ soundcard with an outstanding sound quality in pocket size

With this small but powerful interface Reloop presents one of the smallest DJ soundcards that can be found on the market - with an outstanding 24 bit sound quality. Special hi-gain outputs allow an extremely pounding club sound catering for lowest latencies while spinning, granted by the USB 2.0 ASIO/CORE driver technology.

Intel Core Duo family
(only Intel MACs)
at least 512 MB RAM

Dimensions: 80 x 20 x 65
mm

Weight: 85 g

Incl. ASIO driver CD, USB
cord

Features

Ultra portable 4-channel

DJ audio interface with

24 bit resolution

Hi-speed USB 2.0 with

low latency ASIO/CORE

Audio drivers

Hi-gain outputs for

powerful club sound

2 stereo RCA outputs for

use with an external DJ

mixer

Stereo 1/4" headphones

output for use with

software mixer

2 play modes: External

mixer mode (2 separate

channels can be routed

to an external mixer),

controller mode (1x

master out is routed to

the sound system and

headphones can be

connected directly to the

interface)

Volume controls and

signal status LEDs for

direct, visual monitoring

Separate volume

controllers for channels 1

& 2, master &

headphones respectively

USB bus powered

Burglar-proof:

Kensington lock

Low latency ASIO/Core

Audio drivers

Compatible with Mac OS

X and Windows

XP/Vista/7

Elaborate connecting possibilities

Thanks to the elaborate connecting possibilities, Reloop Play offers two play modes. On the one hand there is the external mixer mode: with it, it is possible routing two separate stereo channels to an external mixer - this mode will be appreciated by all professional Traktor users. The second mode is called the controller mode: In this case a master output is routed to the sound system and it is possible to connect headphones directly to the interface - this mode is especially appropriate for laptop DJs without further hardware. Both stereo channels' volume can be comfortably adjusted via separate controllers. The signal status LEDs allow a visual monitoring so that everything remains in view and under control. Small, professional and always present: Plug&Play.
