The RF-15.85 is a passive, two-way system for fixed or portable sound reinforcement systems. Bass frequencies are reproduced by a 15P low frequency transducer with aluminum chassis. High frequency reproduction is handled by an M-30 compression driver with 2" titanium diaphragm. The driver is coupled to a rotatable 80° x 50° horn. The cabinet is equipped with a standard pole-mount socket and two steel-reinforced handles. 12 M10 rigging points and an extensive range of mounting accessories allows for use in permanent installations.
